60,06 USD excl. VAT**

plus shipping

15-16 days* (USA)

Interfacing relay SAR 5 design high-current switching device, mounting type DIN rail, when a control voltage is applied (e.g. incoming ringing voltage of a telecommunications connection line), the SAR switches an external signal generator (e.g. bell, horn or lamp) with its own or .separate power supply on. External signaling can be switched on or off with the built-in switch. The SAR 5 is connected to a telecommunications connection line or a DC voltage signal source and controlled by the ringing voltage or the control voltage. With the help of two potentiometers, the call pause bridging and the duty cycle limitation of the SAR 5 can be set individually. This makes it possible to connect a wide variety of devices such as flashing lights or impulse switches. The SAR 5 has a changeover contact for connecting the devices. The DIN rail housing ensures clean installation and a concealed connection in the distribution box. The SAR 5 only reacts to the control voltage, not to selection impulses (IWW). Supply voltage: 24V AC/DC

* Note on delivery time: Day = Monday to Friday, no public holiday in Bavaria or Saxony. Goods are also delivered on Saturdays (DHL).

** Payment methods may vary from country to country. All prices plus shipping and excluding customs duties or other additional costs (import sales tax) for deliveries outside the EU.

*** Savings compared to RRP = the manufacturer's recommended retail price. RRP is the price recommended to retailers by the manufacturer, importer or wholesaler as a resale price to the customer. The RRP is also referred to as the list price and is defined as the highest possible price that a buyer would pay for a specific product before any discounts (Source of gross list prices: Germany).
