The maximum current that may flow through the feed terminal is 6.3 A. When configuring the system, make sure that this total current is not exceeded. If this is the case, an additional feed terminal must be used. The feed terminal must be protected by a fuse (size 5 x 20 mm). The replacement can be done quickly and easily by pulling out the fuse holder. A defective fuse and the status of the operating voltage are signaled via LEDs. The bus terminal transmits a bit for the status of the fuse and a second bit for the status of the operating voltage to the fieldbus coupler.
