Control Unit Modbus RTU CMS-600 supply voltage 21.6 ... 26.4V, number of phases 3, power 0.024kW, rated operating current Ie at AC-1 / AC-3 / AC-5, 230 V 0A, rated operating current Ie at AC -15, 400 V 0A, energy consumption reduction 0%, apparent power reduction 0kVA, reactive power reduction 0kvar, mains voltage reduction 0V, supports protocol for MODBUS, with Ethernet communication interface, with RS-485 communication interface, width 71.8mm, depth 87mm, height 64.9mm, The CMS Control Unit Modbus RTU CMS-600 is used for multi-channel monitoring of direct and alternating currents in final circuits. Various sensor mounting variants allow use in any installation environment and offer high measuring accuracy and a wide measuring range. Communication with up to 2x32 sensors takes place via two integrated Modbus RTU interfaces. 247 addresses (Modbus IDs) can be set on the device. This means that several thousand measuring points can be queried via the same bus line. The CMS is therefore ideal as a highly efficient current measuring system, even in very large and extensive electrical systems. The entire system configuration and all measuring functions can be carried out particularly easily via the touch display. A 2-wire RS485 Modbus-RTU interface is also available for remote query and further processing of the measurement data. The system complies with DIN EN 61010-1.
